**SYSTEM AND METHOD FOR CREATING WEB PAGES WITH
WORD PROCESSING TEMPLATES**

5   **Abstract of the Disclosure**

A computer-implemented system for creating files that can be viewed on the World Wide Web. The system employs an HTML authoring software module that works in conjunction with a word processing software module to create web pages. The HTML authoring software module

10   uses the templates available in the word processing software module to create style groups. Users can invoke the style groups when converting a text document to an HTML document in order to achieve uniformity and customization with the text and HTML code that comprise a web page.
